Investment Risks

The NAV per unit of the Fund is subject to fluctuations in the prices of the securities in which the Fund invests. All profits and losses arising from the fund management are attributable to the investor. The investor's principal is therefore not guaranteed. Investors may suffer losses due to a decline in the NAV per unit and investors could therefore experience a potential loss of principal. Factors causing the NAV per unit of the Fund to fluctuate include "stock price fluctuation risk", and other risk factors that are not limited to the aforementioned. Because of the risk characteristics, investment trusts including ETFs are fundamentally different from deposits and savings.
